**GMES
AND AFRICA**

Early Warning For Food Security Using Satellite-based Crop And Rangeland Monitoring System

The East Africa Agriculture Hotspots

Agenda

- Regional Overview
- Crop and Rangeland Condition Assessment in the Region
- The System: East Africa Agriculture Hotspots

Regional Overview

- ❑ Approximately 70% of the region highly dependent on subsistence rain-fed agriculture (crops & animals) that contributes significantly to the region's economy
- ❑ More than 80% of the region classified under ASAL
- ❑ Climate variability and change are one of the main drivers of food crises
- ❑ Future climate projections indicate increased frequency and intensity of extreme weather/climate events (drought, floods)
- ❑ Therefore need for continuous monitoring of agricultural conditions across seasons and across boundaries as early warning tool for early action
- ❑ 11 Eastern Africa countries
 - Burundi, Djibouti, Ethiopia, Eritrea, Kenya, Somalia, South Sudan, Sudan Tanzania, Rwanda, Uganda

East Africa Agriculture Hotspots

- ❑ Public online system for **monitoring crop and rangeland conditions** in near-real time
- ❑ Provides **automatic 10-day** warnings for poor or delayed vegetation

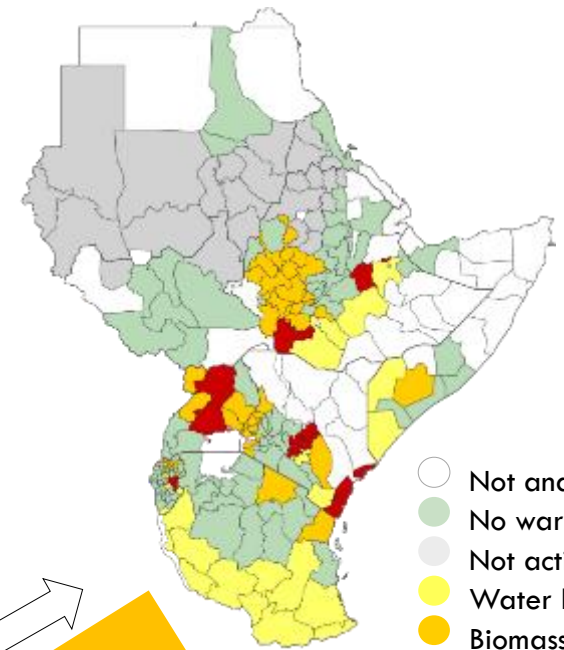

Conditions in the field

Recorded by
satellites

Satellite derived data

- Not analyzed
- No warning
- Not active
- Water balance
- Biomass
- Water balance + biomass
- End of season biomass

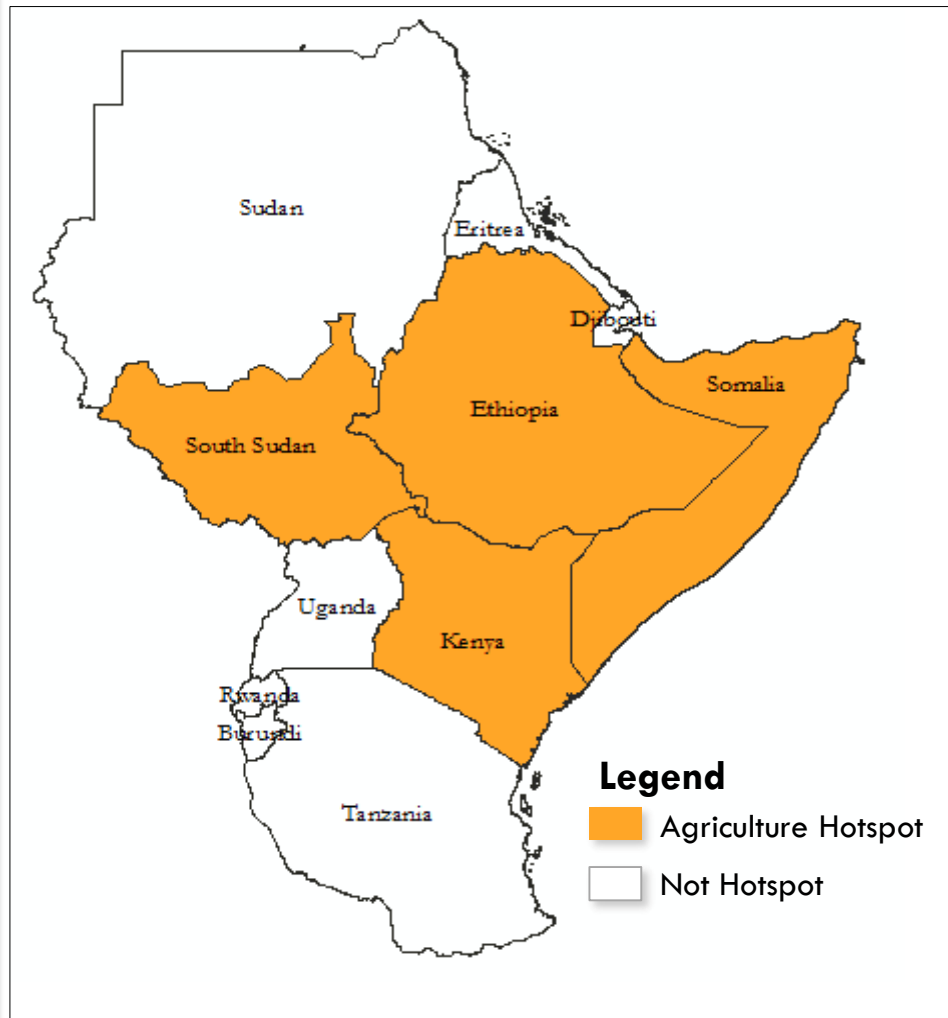

Actionable
decision-making
information

- ❑ ICPAC system that uses a service of the JRC implemented under the **Intra-ACP project**
- ❑ An adaptation of the ASAP system developed by JRC

JUNE ASSESSMENT FROM AGRICULTURE HOTSPOTS

<https://agriculturehotspots.icpac.net/>

Regional June 2021 Assessment

4 countries classified as agricultural hotspots

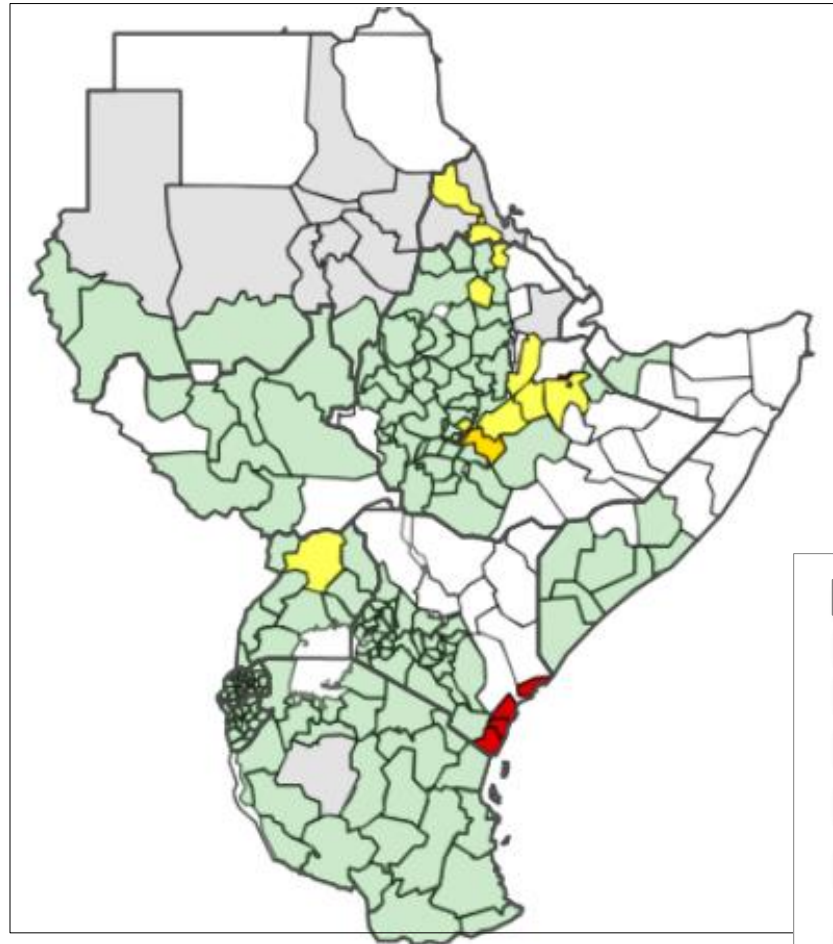

Based on :

- Warnings from **EA Agriculture Hotspots**
- Field information
- Partner sources; GEOGLAM, ASAP, FSNWG, IPC

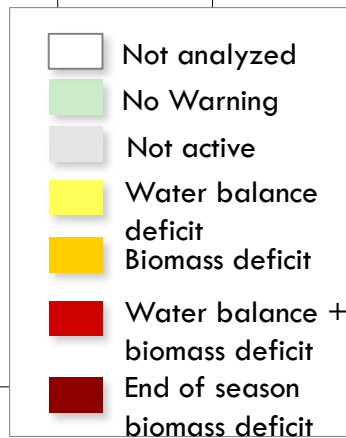

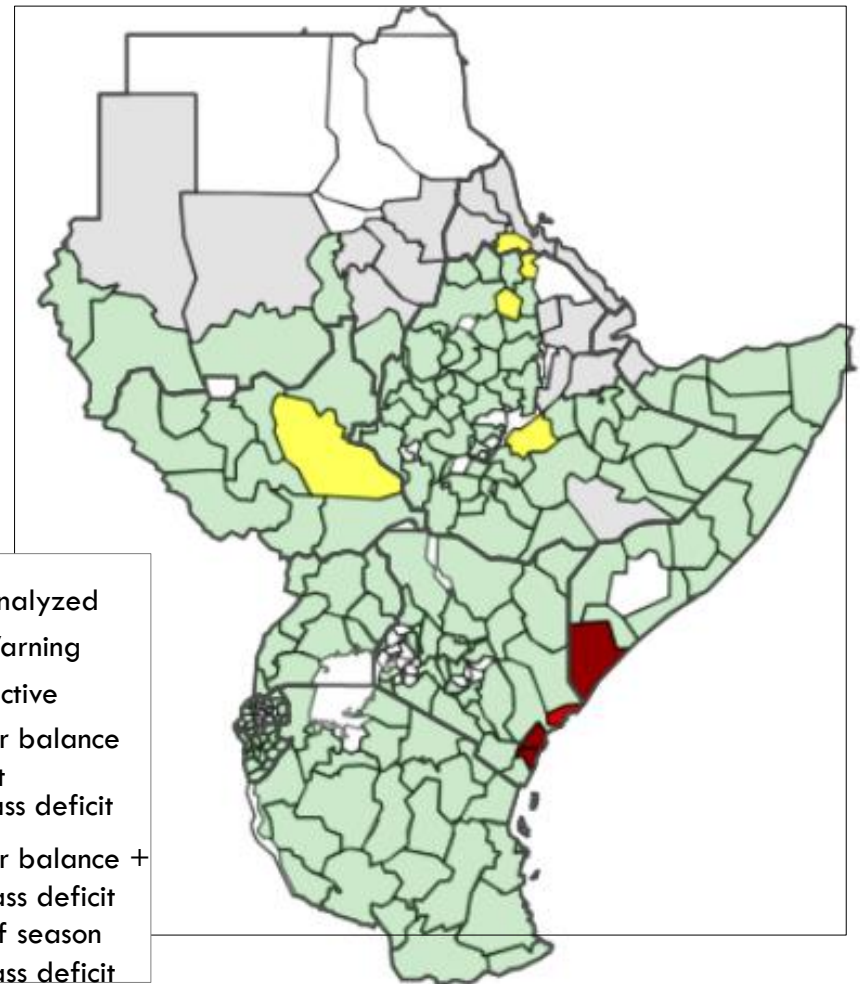

JUNE ASSESSMENT FROM AGRICULTURE HOTSPOTS

<https://agriculturehotspots.icpac.net/>

June Cropland Warnings (21st –30th June)

June Rangeland Warnings (21st –30th June)

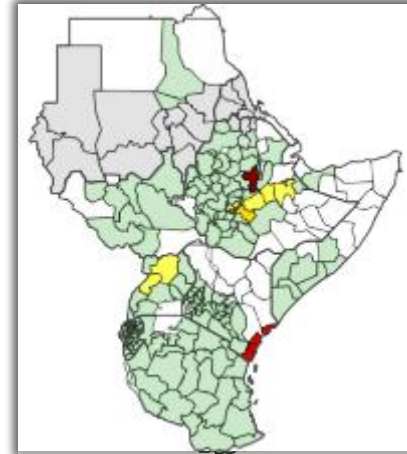

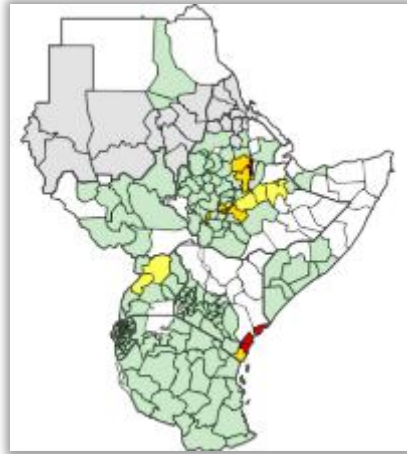

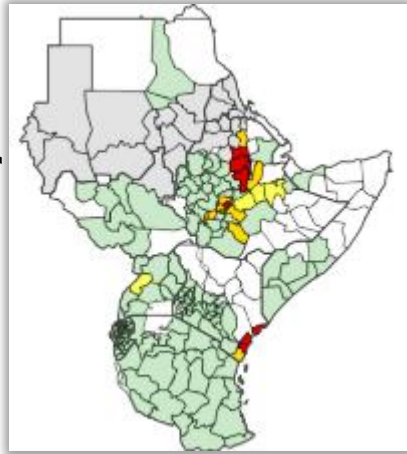

01st – 10th

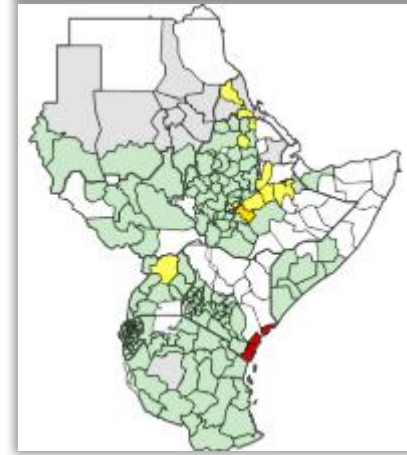

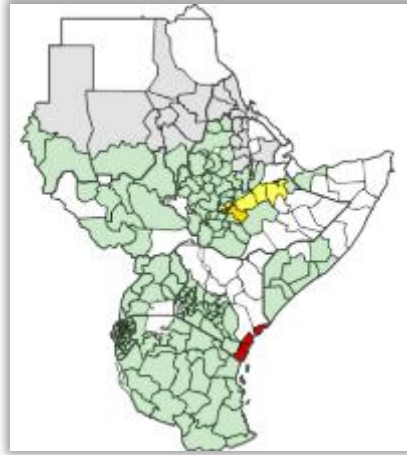

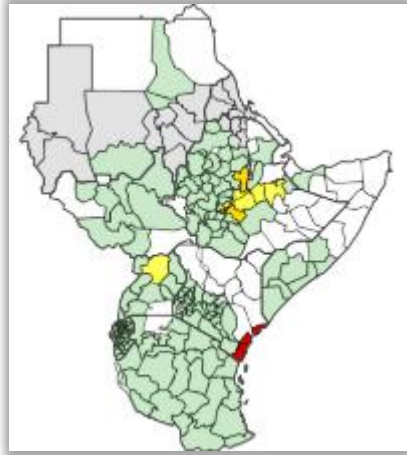

11th – 20th

21st – 30th

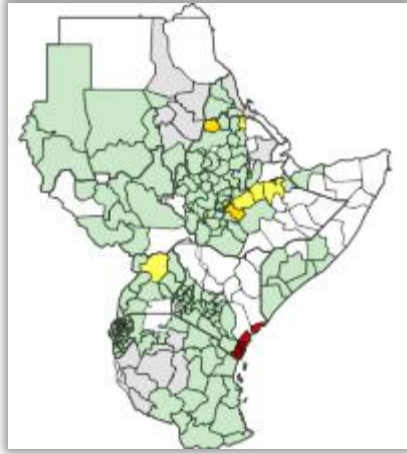

May

June

July

WARNINGS FOR CROPLAND MAY-JUNE-JULY 2021

LEGEND

-  No warning
-  Water balance deficit
-  Biomass deficit
-  Water balance + biomass deficit
-  End of season biomass deficit
-  Not active
-  Not analyzed

KENYA – JUNE ASSESSMENT FROM AGRICULTURE HOTSPOTS

Hotspot

- ❑ Coastal region most affected (Kilifi, Malindi, Kwale and Lamu counties)
- ❑ Irregular and delayed rains in previous MAM season
- ❑ Coastal areas showing water balance deficit and vegetation stress (level 3 warning)

KEN – Kilifi, 2021 June 3rd Dekad

NDVI-Rainfall time-series

— 2021 NDVI — 2020 NDVI - - - His. avg. NDVI
● 2021 Rain ● 2020 Rain ● His. avg. Rain

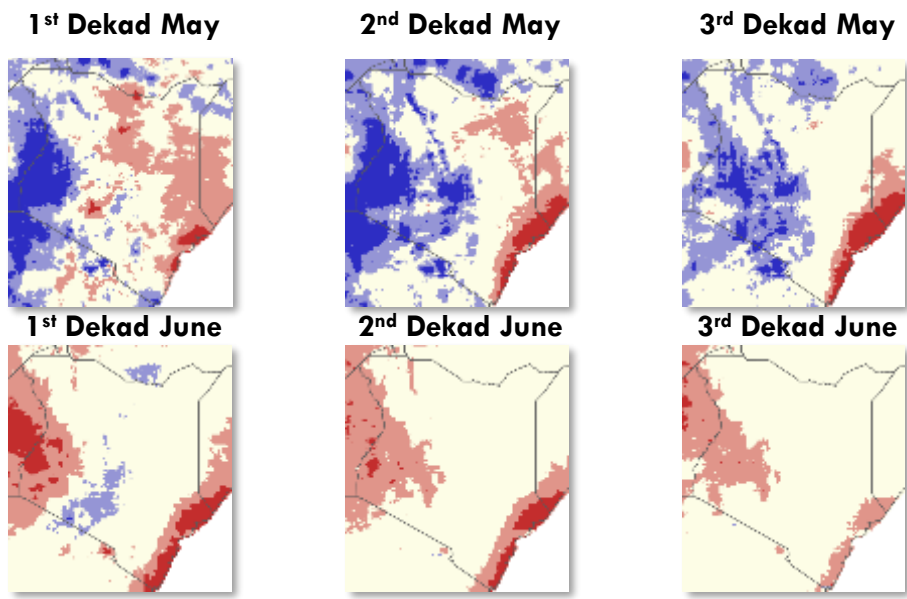

73% 97% 100%
 Poor vegetation Severe water deficit Poor rain (last 90d)

■ Below normal
■ Above normal

Active Crop Area

30d Rainfall Anomaly

UGANDA – JUNE ASSESSMENT FROM AGRICULTURE HOTSPOTS

Non-Hotspot

- ❑ Warnings in North Uganda
- ❑ Irregular and delayed rains in MAM
- ❑ As of June, still at the beginning of a long season therefore a chance of recovery if receives rain
- ❑ Vegetation (NDVI) lower than normal at the start of the season, recovered towards end of April but on the decline as of June

UGA – Mid Northern, 2021 June 3rd Dekad

6%

Poor vegetation

9%

Severe water deficit

37%

Poor rain (last 90d)

Active Crop Area

30d Rainfall Anomaly

1st Dekad May

2nd Dekad May

3rd Dekad May

1st Dekad June

2nd Dekad June

3rd Dekad June

SOUTH SUDAN – JUNE ASSESSMENT FROM AGRICULTURE HOTSPOTS

Hotspot

- ❑ No agro-meteorological warnings for crops, however classified as hotspot because of socio-economic, conflict and impact of 2020 floods
- ❑ Water deficit warning for rangeland over Jonglei
- ❑ Exceptional vegetation conditions recorded for Jonglei, Upper Nile, Unity and North Bahr Ghaza
- ❑ NDVI above normal, and higher than 2020; rainfall higher than above normal

SSD – Jonglei, 2021 June 3rd Dekad

49%

Abundant vegetation

3%

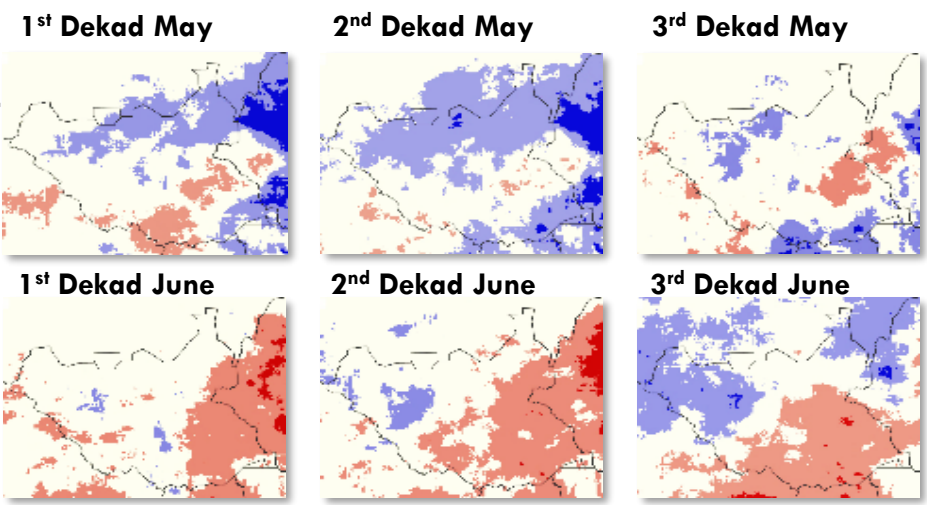

Poor vegetation

14%

Poor rain (last 90d)

Active Crop Area

30d Rainfall Anomaly

Below normal
Above normal

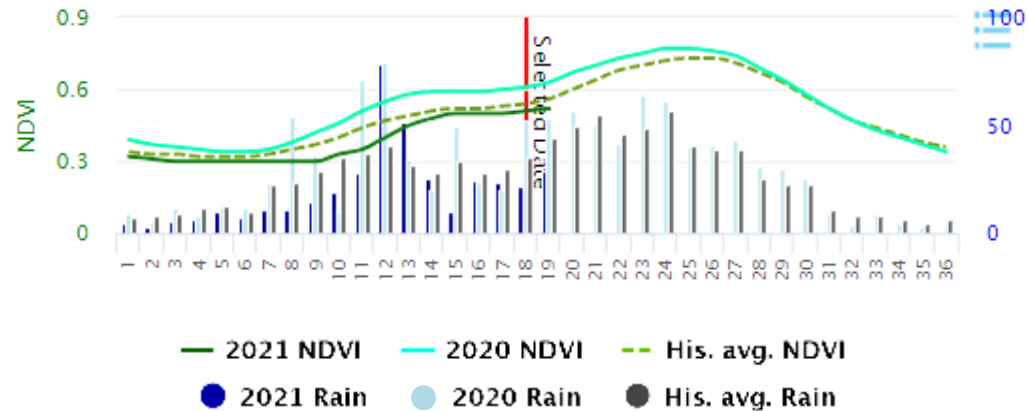

ETHIOPIA – JUNE ASSESSMENT FROM AGRICULTURE HOTSPOTS

Hotspot

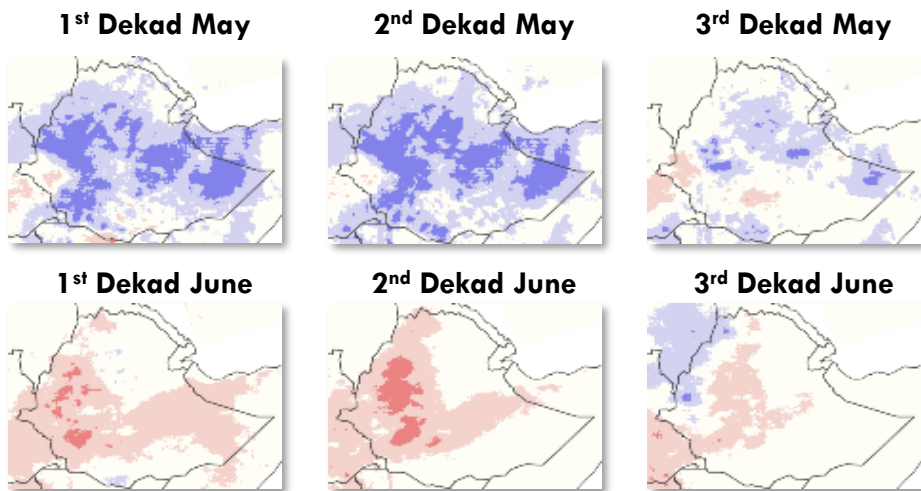

- ❑ Central-Eastern Ethiopia most affected
- ❑ Irregular and delayed rains in March-April-May season affecting Belg crops,
- ❑ Rains towards end of April beginning of May good start of main season
- ❑ Followed by below average rain in June. As of June, most areas with warnings are due to water deficit (level 1 warning)
- ❑ Improvements observed between May and June assessment

Ethiopia – West Arsi, 2021 June 3rd Dekad

NDVI-Rainfall time-series

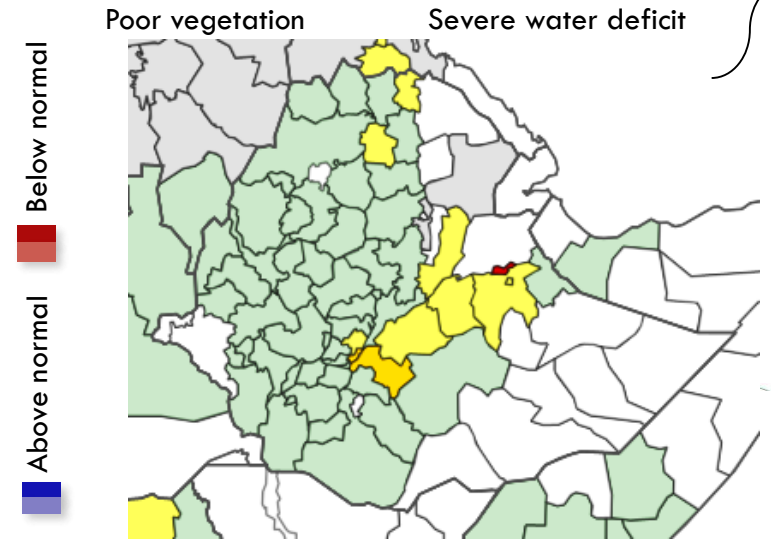

30d Rainfall Anomaly

37%

17%

Active Crop Area

ETHIOPIA TIGRAY

- ❑ The humanitarian aid community is focusing on Tigray where there is a high risk of food insecurity
- ❑ Main crop season is just starting in July, the small orange/red dots are fields that at the same time of the year (first 10 days of July) appear less green in 2021 than in 2020. Meaning they are not (yet) planted in 2021.
- ❑ Further monitoring needed in July/August to confirm significant decrease in cultivated area

ASAP High Res. Viewer: 10 m SENTINEL imagery for monitoring decrease of crop area in Tigray

Western

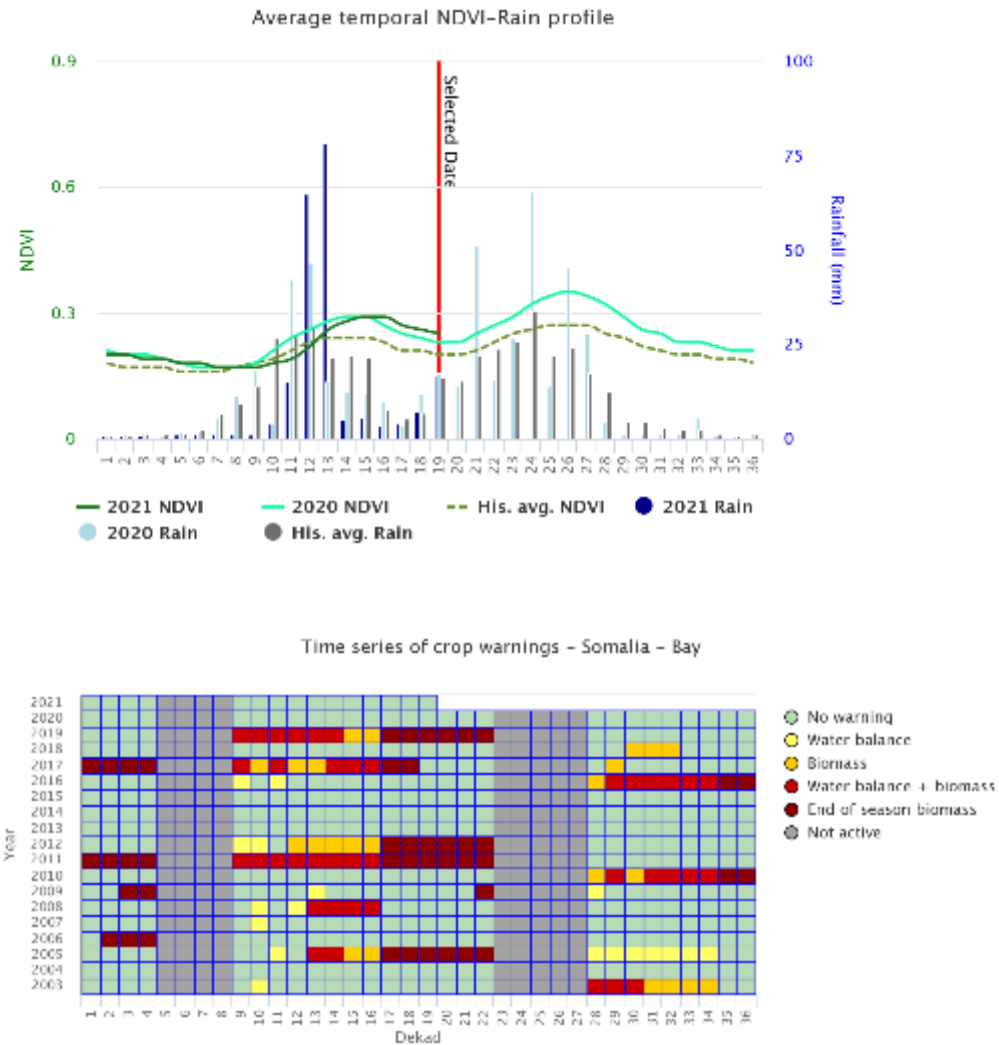

Eastern

SOMALIA

Hotspot

- ❑ No strong automatic warnings for crops during the season, however very irregular rainfall distribution. 60% of pastoral areas in Lower Juba experienced a severe seasonal rainfall anomaly.
- ❑ In Bay (graphs on the right), the high cumulated rainfall amounts and vegetation signal to some extent hide the negative impact on crop conditions.
- ❑ Because the system is based on statistical comparison with other seasons, in areas frequently hit by drought, a moderate drought does not appear as exceptional
- ❑ Proves that automatic warnings are not sufficient and still need to be integrated by experts analysis

MAY CROPLAND WARNINGS – ADMIN LEVEL WARNINGS

Ethiopia		Uganda	Kenya
Debubawi	Guji, North Shewa	Gulu	Kwale
Semen Wello	Sidama	Pader	Kilifi
Debub Wollo	Mirab Arsi	Kitgum	Uasin Gishu
Oromia	Hadiya	Lira	Taita Taveta
Afar Zone 3	Wolayita	Apac	Makueni
Mirab Hararghe	Alaba	Masindi	Lamu
Misraq Harerge	Kembata Tembaro	Lake Albert	West Pokot
Arsi	Dawro	Hoima	Elgeyo-Marakwet
Misraq Shewa	Konta	Kibale	
Silti	Basketo		
Debub Mirab Shewa	Jimma		
Hareri	Yem		
Fafan, Horo Guduru	Gurage		
Bale	Mirab Shewa		
Dire Dawa			

Legend

-  Water balance deficit
-  Biomass deficit
-  Water balance + biomass deficit
-  End of season biomass deficit

JUNE CROPLAND WARNINGS – ADMIN LEVEL WARNINGS

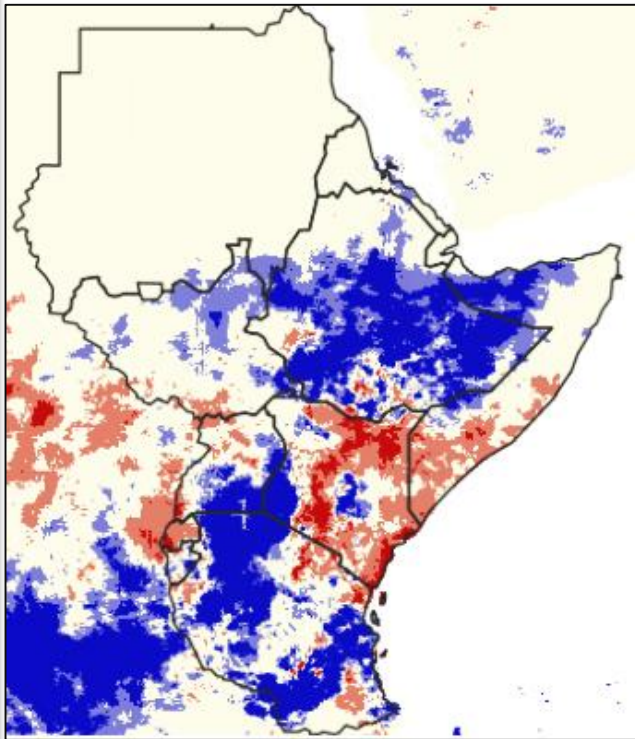

Ethiopia	Uganda	Kenya	Eritrea
Dire Dawa	Gulu	Kwale	Debub
West Arsi	Pader	Kilifi	Maekel
Alaba	Kitgum	Lamu	Anseba
Selti	Lira	Malindi	
Arsi	Apac		
West Harerge			
East Harerge

THE SYSTEM

East Africa Agriculture Hotspots

<https://agriculturehotspots.icpac.net/>

INTRODUCTION TO THE SYSTEM

A web-GIS environment:

- Weather and
- Earth Observation (EO) indicators
- Automatic warnings regarding poor or delayed vegetation performance every 10

A statistics dashboard:

- Indicators statistics aggregated at sub-national level(s)
- Additional information such as crop calendars, warnings time-series, progress of the season

East Africa Agriculture Hotspots in a nutshell: a complete platform to explore and analyze EO-derived data for agriculture monitoring

<https://agriculturehotspots.icpac.net/>

WHAT CAN YOU DO IN THE SYSTEM?

1

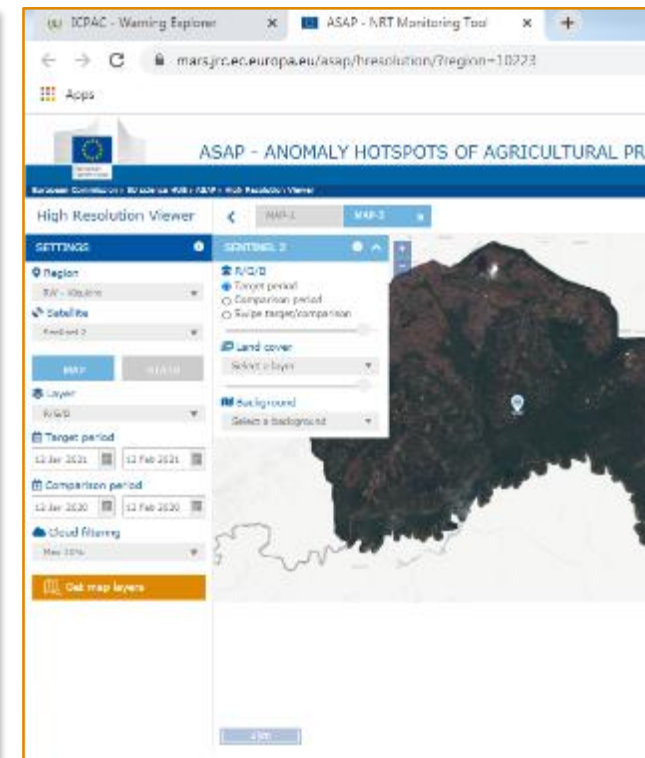

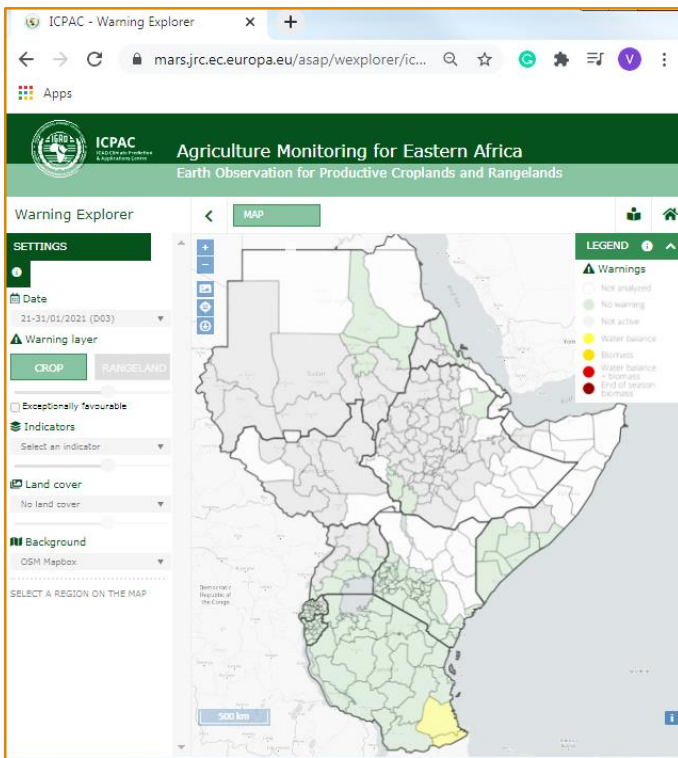

Automatic warning classification

2

Statistics dashboard

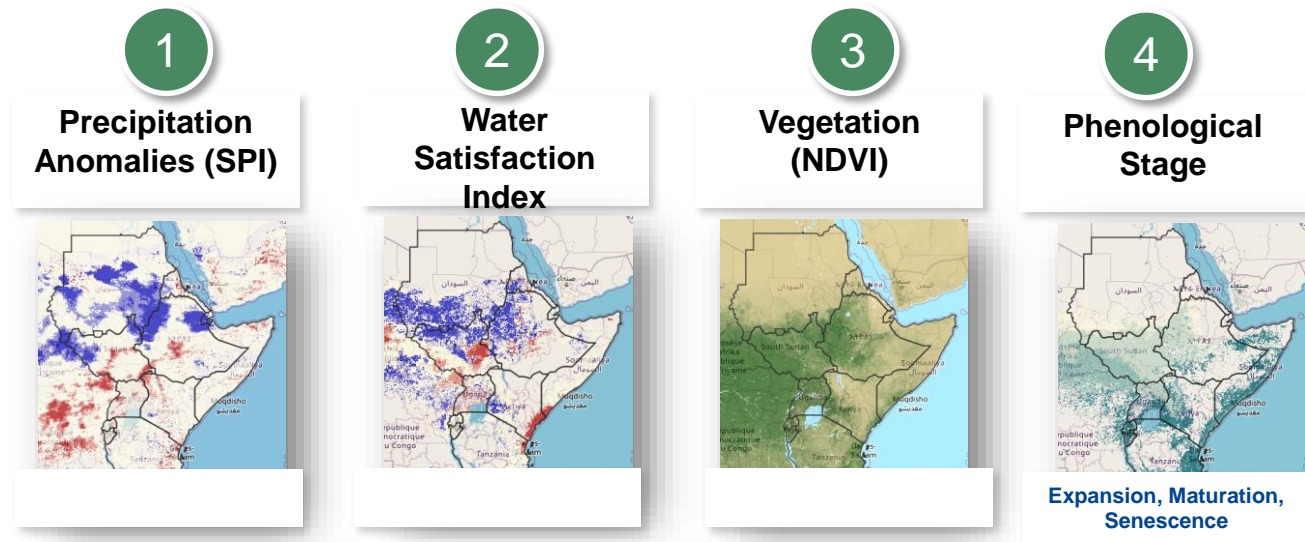

3

High Resolution Viewer (JRC)

WARNING CLASSIFICATION

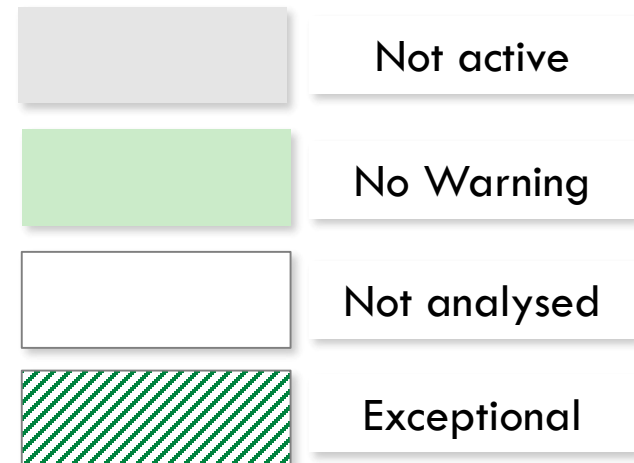

Agriculture
Warning Indicator

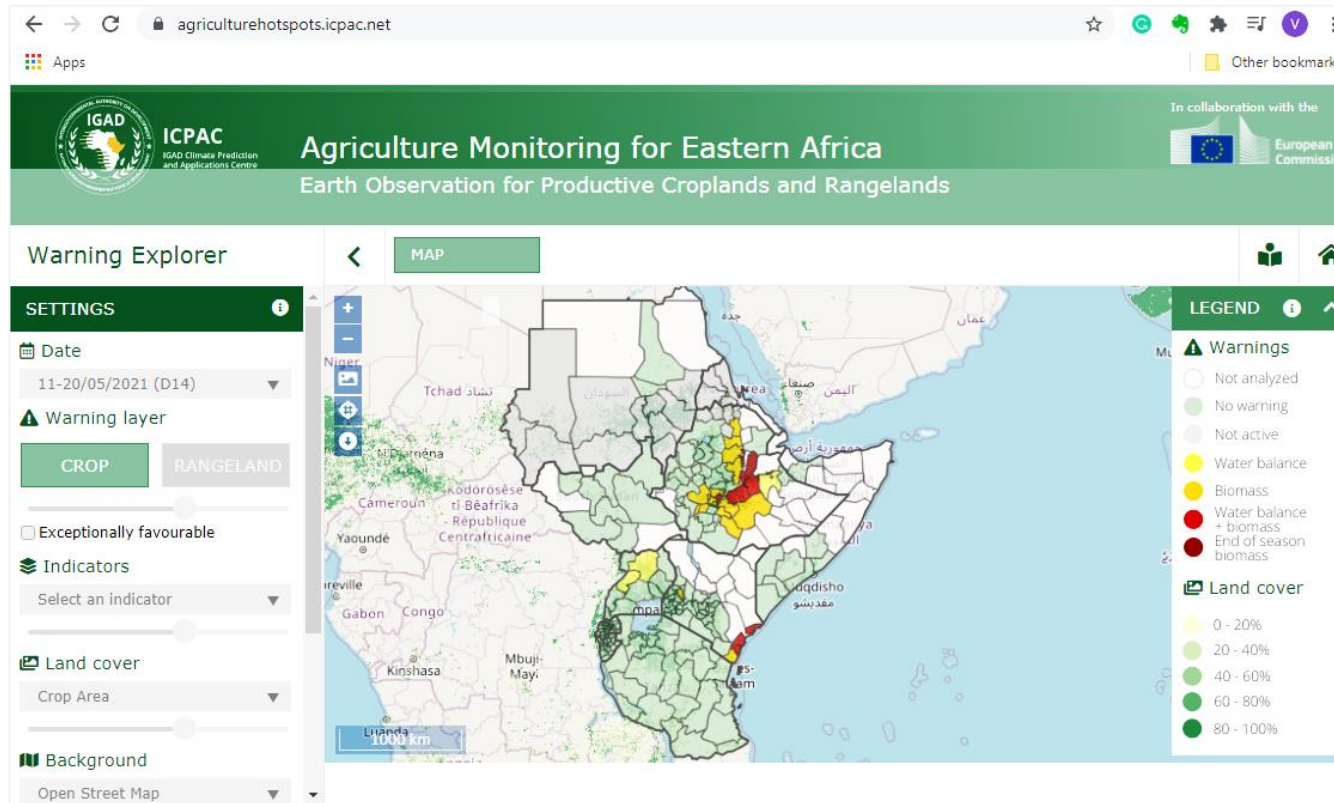

4 categories of Warnings

**NB: Only for active season and
crop/rangeland area**

AVAILABLE INDICATORS

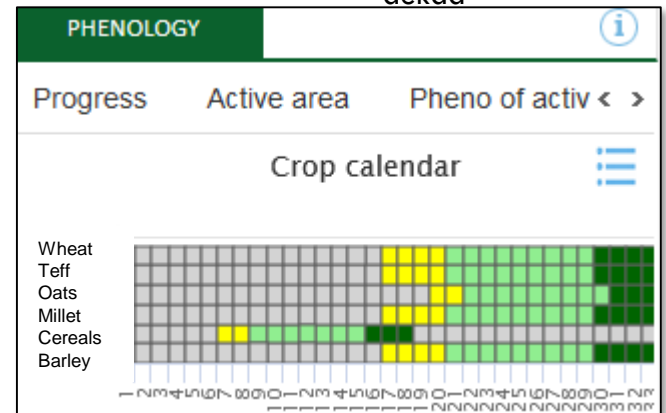

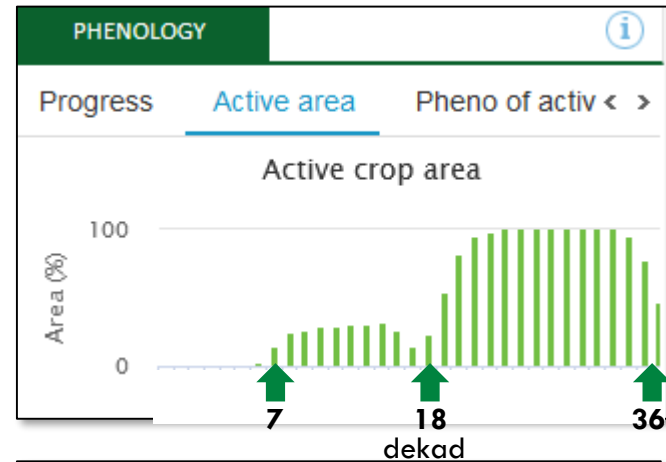

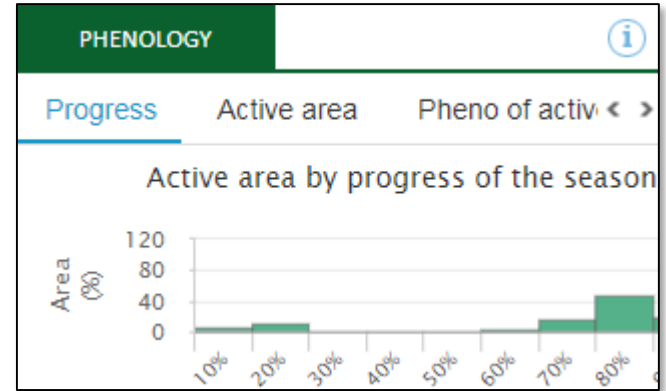

Warning Layer

10day	
NDVI indicators	Rain indicators
NDVI	Rainfall 10-days
NDVI _d	Rainfall 10-days difference
zNDVI	Rainfall 30-days difference
mNDVI _d	Rainfall 90-days % difference
zNDVI _c	Rainfall 10-days forecast

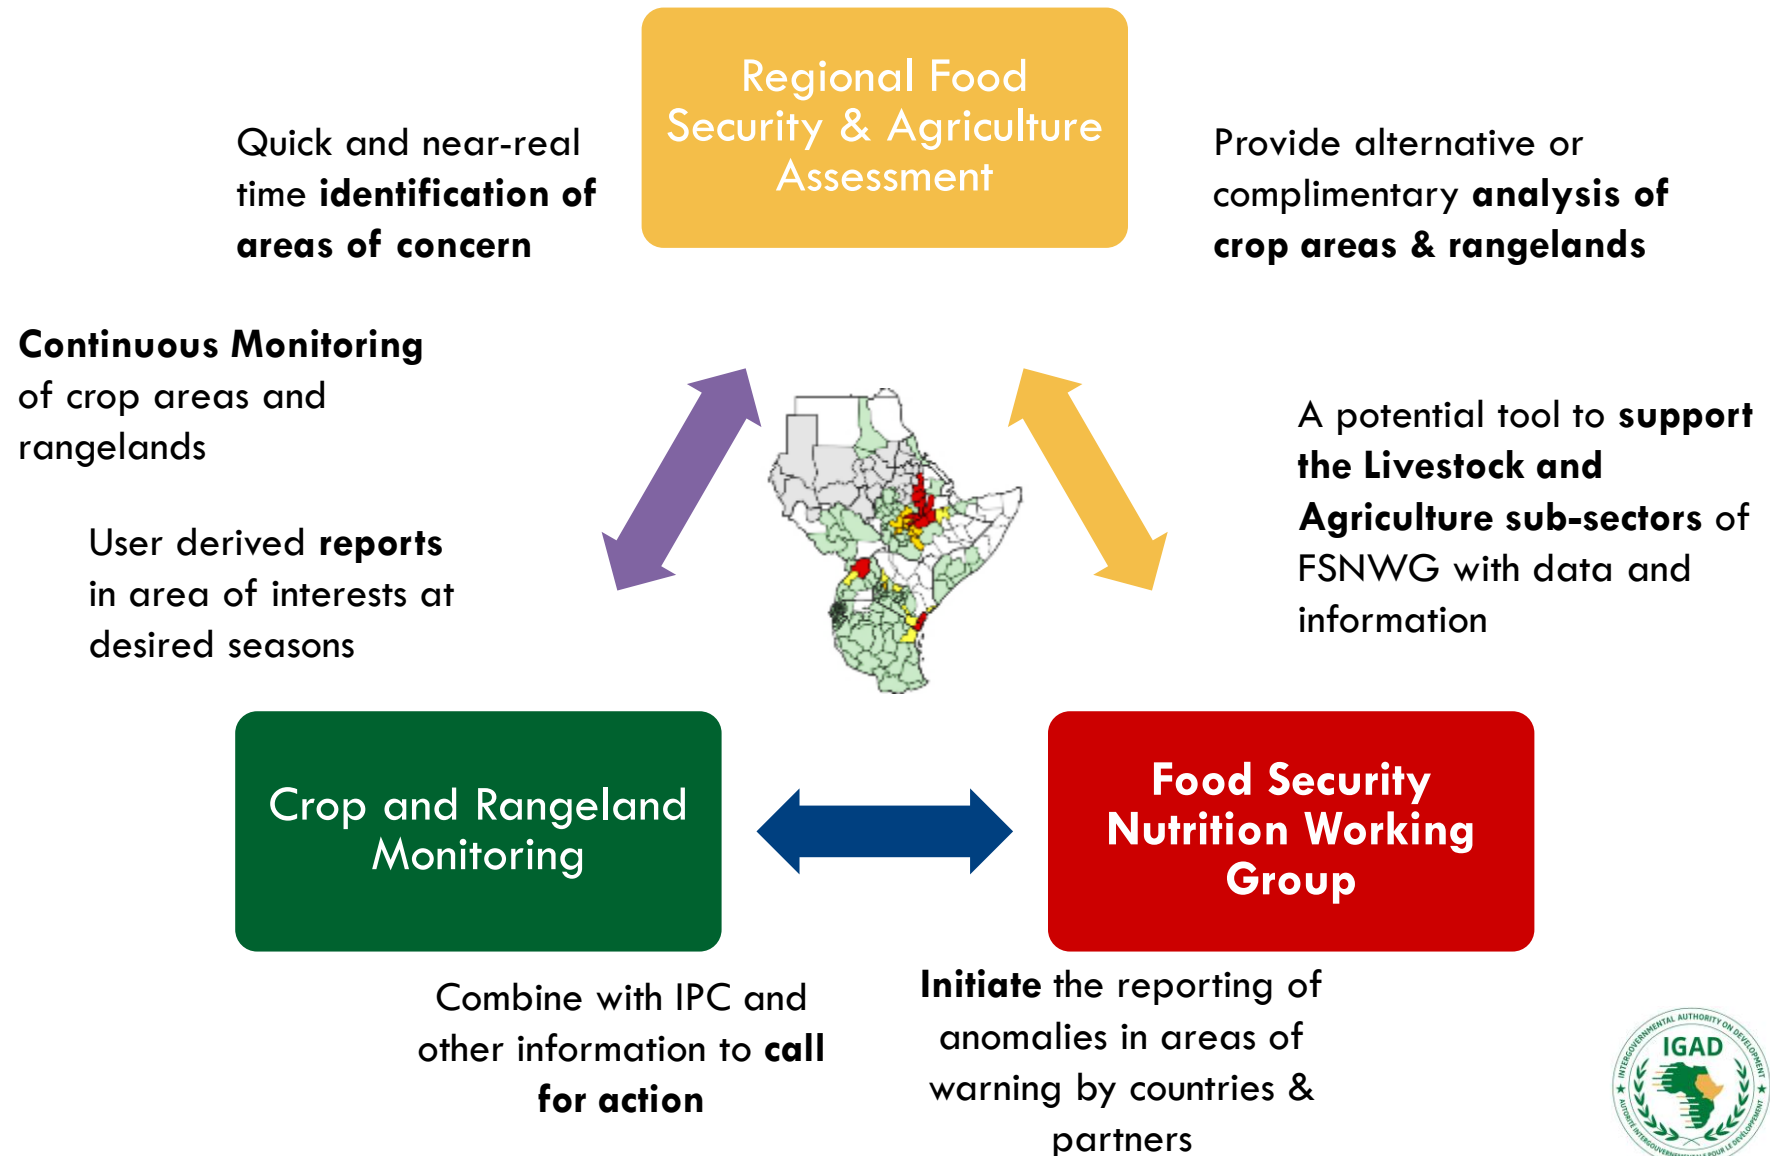

SPI	zWSI	Temperature diff
1 month	Crop	Season progress
3 months	Rangeland	

- Visualization of raster layers for selected weather and biophysical indicators and their anomalies
 - Maps can be downloaded as georeferenced png
 - It is possible to retrieve the pixel value
 - Background layers, land cover layers and opacity bars facilitate image interpretation
 - All time series is available from 2003
 - Warning maps available from 2009
- ✓ Look for convergence of evidences
✓ Consider correlation among indicators

STATISTICS AT ADMINISTRATIVE 2 LEVEL
