ENDLINE RESULTS FOR PRIME

The Pastoralist Areas Resilience Improvement and Market Expansion (PRIME) project included four types of interventions to help households recover from climate-related shocks. Comprehensive Resilience Programming (CRP) included three of the four interventions. The endline impact evaluation found that **CRP strengthened household resilience to shocks**.

- Defined as exposure to (or participation in) 3 out of 4 of the intervention areas.
 - 5 out of 4 of the intervention areas.

PRIME Background

3. Financial services (IRI, IR2, IR3)

4. Climate change adaptation (IR2)

The Pastoralist Areas Resilience Improvement and Market Expansion (PRIME) project, funded under the United States Government's Feed the Future initiative,¹ was implemented from October 2012 to September 2017 in one of the most shock-prone areas of the world, the drylands of Ethiopia. A key objective of the project was to enhance the resilience of households to shocks. In particular, it aimed to enable households to withstand and recover from the recurrent climate-related shocks—mainly drought—which are common in the area.

¹ Feed the Future seeks to address global food insecurity in 19 focus countries by accelerating growth of the agricultural sector, addressing the root causes of undernutrition, and reducing gender inequality. USAID is responsible for leading the government-wide effort to implement the Feed the Future initiative, whose high-level target is: "to reduce by 20 percent the prevalence of poverty and the prevalence of stunted children under 5 years of age in the areas where we work." (USAID 2013).
